0.1	—	Anil B	Initial content drafted from concept pitch & presentation
1.0	17 Sep 2026	Anil B	First formal BRD draft compiled for review

2. Executive Summary

DocRenew is a proposed cloud-based, compliance-automation platform that helps organizations track the expiry and renewal dates of critical employee documents and organizational assets — including passports, visas, work permits, driving licenses, and professional certifications, as well as product warranties, vehicle maintenance schedules, recurring bills, and Annual Maintenance Contracts (AMCs). The platform stores every record in one secure, central repository and automatically sends escalating reminders to both employees and management via email, SMS, and mobile/app push notifications at defined intervals before and after expiry (3 months, 1 month, 5 days, on expiry, and after expiry).

By replacing manual, spreadsheet-based tracking with a proactive, automated workflow, DocRenew aims to eliminate missed renewals, reduce HR administrative effort by up to 90%, maintain continuous regulatory compliance, and give management full, real-time visibility into the compliance status of the entire workforce.

This document defines the business requirements for DocRenew: the problem it solves, its scope, stakeholders, functional and non-functional requirements, and the success criteria against which the solution will be measured.

3. Business Objectives

- Eliminate missed document renewals across the organization's workforce.
- Reduce manual HR effort spent tracking expiry dates by automating the reminder workflow.
- Maintain continuous legal and regulatory compliance for all employee documents.
- Provide management with real-time, centralized visibility into document status across the company.

- Improve employee accountability and awareness of their own renewal deadlines.
- Minimize operational disruption caused by employees being taken off duty due to expired credentials.
- Offer a configurable, multi-tenant SaaS product that can be sold to compliance-driven organizations across multiple industries.

4. Problem Statement

Organizations that employ staff holding time-bound documents — passports, visas, work permits, licenses, and certifications — face significant risk when even one of these lapses unnoticed. The same problem extends to time-bound organizational items that are tracked just as poorly today: product warranties, vehicle maintenance schedules, recurring bills, and Annual Maintenance Contracts (AMCs) that need timely renewal or payment. Today this tracking is largely manual, reactive, and fragmented across spreadsheets and individual memory, which does not scale as the workforce (or the asset base) grows and fails silently when someone forgets to check.

Risk area	Impact
Legal & regulatory risk	An expired visa or work permit can result in fines, failed audits, and employees no longer legally cleared to work.
Operational disruption	A lapsed certification or license can pull a driver, nurse, or operator off the job with no warning, halting work.
Manual, reactive tracking	HR teams chase renewal deadlines by hand across scattered files — a process that does not scale and fails silently.

5. Scope

In Scope

- Central, secure repository for storing employee document records and metadata (type, number, issue date, expiry date, attachments).
- Extended reminder categories beyond employee documents: product warranties, vehicle maintenance schedules, recurring bills, Annual Maintenance Contracts (AMCs), and a configurable "Other Notifications" category for anything else time-bound the organization wants tracked.
- Automated, escalating notification engine covering 3-month, 1-month, 5-day, on-expiry, and post-expiry (management escalation) touchpoints — applied uniformly across documents and the extended categories above.
- Multi-channel delivery of notifications: email, SMS, and mobile/web app push notifications.
- Live dashboard showing upcoming, expiring, expired, and renewed items at a glance, across documents, warranties, vehicle maintenance, bills, and AMCs.
- Role-based access control for Admin, HR, Manager, and Employee user types.
- Configurable reminder schedules and rules per item type and per organization.
- Status tracking and compliance reporting (audit-ready reports on demand).

- Web and mobile access to the platform.

Out of Scope (Phase 1)

- Automated verification or renewal submission with third-party government/regulatory portals.
- Payroll, benefits, or full HR information system (HRIS) functionality beyond document tracking.
- Native offline mode for mobile applications.
- Integration with specific third-party HRIS/ERP systems (to be assessed in a later phase).

6. Stakeholders

Stakeholder	Role / Interest
Employees	Document holders; receive and act on renewal reminders for their own documents.
HR team	Primary system administrators; monitor compliance status and follow up on renewals.
Management / Leadership	Receive escalations for overdue renewals; require compliance visibility and reporting.
System Administrator	Configures reminder rules, manages users, roles, and platform settings.
Compliance / Legal	Uses audit-ready reports to demonstrate regulatory compliance.
Project Sponsor (Zamorins Solutions)	Owns the product vision, funding, and go-to-market decisions.
Development Team	Designs, builds, and maintains the DocRenew platform.

7. Assumptions, Constraints & Dependencies

Assumptions

- Organizations onboarding to DocRenew will provide accurate document data and expiry dates for their employees.
- Employees and managers have access to email and/or a mobile device capable of receiving SMS and push notifications.
- The platform will be delivered as a cloud-hosted, multi-tenant SaaS product.

Constraints

- Notification timing (3 months / 1 month / 5 days / on expiry / after expiry) must be configurable to accommodate different document types and organizational policies.
- The system must comply with data protection regulations applicable to storing personal identification document data (e.g., passport and visa numbers).
- SMS delivery is dependent on third-party SMS gateway providers and associated costs.

Dependencies

- Third-party email delivery service (e.g., SMTP/transactional email provider).
- Third-party SMS gateway integration.
- Push notification infrastructure for the mobile/web application.

8. Functional Requirements

ID	Requirement	Description
FR-1	Document repository	The system shall provide a central, secure repository to store employee document records (type, number, issue date, expiry date, attachments) for passports, visas, work permits, licenses, and certifications.
FR-1A	Extended item categories	The system shall support tracking renewal/due dates for additional item categories beyond employee documents — product warranties, vehicle maintenance, recurring bills, Annual Maintenance Contracts (AMCs), and a configurable Other Notifications category — using the same repository and metadata model as FR-1.
FR-2	Secure storage	The system shall store document details in encrypted form and restrict access based on user role.
FR-3	Automated reminders	The system shall automatically generate and send renewal reminders based on each document's expiry date without manual intervention.
FR-4	Escalating notification schedule	The system shall send notifications at 3 months, 1 month, and 5 days before expiry, on the expiry date, and escalate to management after expiry if unresolved.
FR-5	Dual notification tracks	The system shall notify both the employee and the company/HR in parallel at each reminder stage, and escalate separately to management after expiry.
FR-6	Multi-channel delivery	The system shall deliver notifications via email, SMS, and mobile/web app push notification.
FR-7	Live dashboard	The system shall provide a live dashboard showing documents that are upcoming, expiring soon, expired, and recently renewed.
FR-8	Status tracking & reporting	The system shall allow users to track renewal progress and generate compliance/audit-ready reports on demand.
FR-9	Role-based access control	The system shall support distinct access levels for Admin, HR, Manager, and Employee roles, each restricted to an appropriate view of the data.
FR-10	Configurable reminder rules	The system shall allow organizations to configure custom reminder schedules per document type and per organizational policy.
FR-11	Web & mobile access	The system shall be accessible via a web application and a mobile application, allowing users to view documents and receive alerts on the go.
FR-12	Profile management	The system shall allow HR/Admin users to manage employee profiles and associate document records with the correct employee.

9. Notification & Escalation Matrix

The core of DocRenew's workflow is a proven, escalating reminder timeline that runs automatically against every tracked item's due date — whether that item is an employee document, a product warranty, a vehicle maintenance schedule, a recurring bill, an Annual Maintenance Contract (AMC), or any item logged under Other Notifications:

When	Notified party	Purpose
3 Months before expiry	Employee & Company	Early reminder to begin the renewal process
1 Month before expiry	Employee & Company	Follow-up reminder if renewal is still pending
5 Days before expiry	Employee & Company	Urgent alert to avoid expiration
On expiry date	Employee & Company	Document has expired — immediate action required
After expiry	Management	Escalation notice for overdue, unresolved renewals

Notification channels: Email (formal notices with document details and deadlines), SMS (direct alerts for time-critical, 5-day-out reminders), and Mobile/App push notifications (so alerts are not buried in an inbox).

10. User Roles & Access

Role	Description
Admin	Full system configuration access: manages organization settings, reminder rules, users, and roles.
HR	Manages employee document records, monitors the compliance dashboard, and follows up on renewals.
Manager	Views the compliance status of their direct reports and receives escalation notifications.
Employee	Views and manages their own document records and receives personal renewal reminders.

11. Non-Functional Requirements

Category	Requirement
Availability	The platform shall run as a cloud-hosted SaaS service with high availability suitable for 24/7 automated monitoring.
Security	Personal identification document data (passport/visa numbers, etc.) shall be encrypted at rest and in transit, with role-based access control enforced throughout.
Scalability	The system shall support a growing workforce and an increasing volume of tracked documents without degradation in reminder reliability.
Usability	Web and mobile interfaces shall be intuitive enough for HR and employees with no

Category	Requirement
	formal training required.
Compliance	The system shall support generation of audit-ready compliance reports on demand.
Configurability	Reminder schedules, notification channels, and user roles shall be configurable per organization without requiring code changes.
Reliability	Automated reminders shall fire accurately and on schedule with zero manual effort or missed triggers.

12. Target Market

DocRenew is designed for any compliance-driven organization where a workforce carries permits, licenses, or certifications that can expire:

- Corporate HR departments
- Manufacturing
- Construction
- Logistics & Transportation
- Healthcare organizations
- Government agencies
- Any compliance-driven employer with a distributed or scaling workforce

13. Success Metrics / KPIs

Metric	Target
Missed document renewals	0 (zero) missed renewals post go-live
Reduction in manual HR tracking effort	Up to 90% reduction
Monitoring coverage	24/7 automated monitoring of all tracked documents
Compliance reporting	Audit-ready report generated on demand, in a single click
Employee awareness	Measurable improvement in on-time employee response to renewal reminders

14. Technology Vision

- **Cloud-native SaaS** — accessible anywhere, always current, with no infrastructure for customers to maintain.
- **Configurable by design** — organizations can define custom reminder schedules and manage profiles their own way.
- **Web & mobile access** — users can manage documents and receive alerts from desktop or on the go.

- **Automated compliance reporting** — audit-ready reports generated on demand.

15. Risks

Risk	Mitigation
Inaccurate or incomplete document data provided during onboarding	Provide validation checks and onboarding templates; require mandatory fields for expiry-critical documents.
Notification delivery failure (email/SMS/push)	Use reliable third-party delivery providers with retry logic and delivery-status logging.
Low employee engagement with reminders	Escalate to management after expiry; make reminders actionable and easy to respond to.
Data privacy/regulatory exposure due to sensitive document data	Encrypt data at rest and in transit; enforce strict role-based access control.

16. Approval

This Business Requirements Document is submitted for review and sign-off by the stakeholders listed below prior to the start of solution design and development.
